3	Where the company opts for expensing of the options using the intrinsic value of the options, the difference between the employee compensation cost so computed and the employee compensation cost that shall have been recognized if it had used the fair value of the options shall be disclosed. The impact of this difference on profits and on EPS of the company shall also be disclosed.	If the Bank had adopted the Black-Scholes model based fair valuation for all its employee, compensation cost for the year ended March 31, 2024, would have decreased by Rs. 2.01 crore and the profit after tax would have been lower correspondingly. Accordingly, on a pro-forma basis, basic and diluted earnings per share for the year ended March 31, 2024 would have been Rs.19.38 and Rs.19.01, respectively

Expected volatility	45.86% - 55.46%	48.13% - 58.56%																		
Risk free interest rates	6.50% - 7.11%	6.81% - 7.29%																		
Expected life of options in years (across each tranche)	2.5-5.5	3.5 - 5.5																		
(ii)	the method used and the assumptions made to incorporate the effects of expected early exercise	N.A.																		
(iii)	how expected volatility was determined, including an explanation of the extent to which expected volatility was based on historical volatility	Expected volatility is a measure of the amount by which the equity share price is expected to fluctuate during the period. The measure of volatility used in Black-Scholes option pricing model is the annualized standard deviation of the continuously compounded rates of return on the share over a period of time. Expected volatility has been computed by considering the historical data on daily volatility in the closing equity share price on NSE of RBL Bank Limited over the expected tenor of each option vesting tranche.
